Find the value of the function $f(x) = \frac{1}{x^2} + \frac{1}{x^3}$ at $x = 1$. Evaluate.

The value of the function $f(x)$ at $x = 1$ can be found by substituting $x = 1$ into the expression.

$$f(1) = \frac{1}{1^2} + \frac{1}{1^3} = 1 + 1 = 2$$

Therefore, the value of the function $f(x)$ at $x = 1$ is $2$.

A. **Each column represents 25 students.**

**Required materials for this section:**

- [List of required materials]

**Instructions:**

1. **Collect the required materials.**
2. **Write down the materials list.**
3. **Insert the materials list into the table.**

**Example:**

<table>
<thead>
<tr>
<th>Class</th>
<th>9</th>
<th>10</th>
<th>11</th>
<th>12</th>
</tr>
</thead>
<tbody>
<tr>
<td>8</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
\[
\frac{6 - x}{x^3} = A \quad \text{substitute the graph of $y$ into the equation of $x$}
\]
